

# Prognostication,

For the Year of our 3

L O R D G O D, 1676.

Being Bissextile or Leap-Year,

and from the Creation of the

World, 5625.

Wherein is contained the exact Day, Hour and  
Minute of the new Moon, her full and Quarters:  
with an accurate description of the Eclipses  
visible and invisible: The daily disposition of  
the weather and moveable Feasts, with the  
whole known Fairs in Scotland: Also, a Table  
of the Moons age throughout the year, and  
Tide-table,

By T. S. a Lover of the Mathematicks.

Edinburgh. Printed for the Year, 1676.

The Anatomy of Mans Body, as it is govern  
by the twelve Signs of the Zodiac;

There are seven Planets in Heaven, whose Names  
and Characters are these following, viz.

Saturn ♄, Jupiter ♃, Mars ♂, Sol ☉, Venus ♀,  
Mercurius ☿, and the Moon ☾.

There are also several Aspects, amongst which the Ancients observe these five especially, viz. The Conjunction (thus Charactered ☿), Sextile ✎, Quartile ☊, Trisc ☌, and Opposition ☍.

## *Description of the Eclipses this year 1676.*

**T** Here will be two Eclipses in this year, and both of them of the Sun. The first of the Sun happens on the first of June, at ten a clock and will be visible to us, and will appear to all about the Hesperides or Canary Islands; and also will be seen to such as inhabit Greenland, Hispaniola, Cuba, &c.

The second Eclipse of the Sun, happens on November the 25. about 8 in the morning; the Sun rises eclipsed as to us, and if the weather prove fair, we may perceive the defect. This Eclipse will also be visible in the Kingdoms of Biafara, Benin in new Gwinee, Madagascar, Virginea, and in the Ethiopick Ocean.

In this year there will be a notable conjunction of Saturn and Mars with the Pleiades, it happens on the 15 day of July, and may be seen a little after Mid night in the east part of heaven, it is a Conjunction well worth the observing though I cannot promise you it shall last very long.

The splendid Planet Venus is our bright evening Star, from the beginning of the year to the 29 day of August; and then passing her Conjunction with the Sun, becomes our glorious morning Star again, and continues so to the end of the year.

### *A D V E R T I S E M E N T.*

The Fair of *Stam*, one whereof is alwayes on the 1<sup>st</sup> day of July, except it happen to fall upon Sunday, Sunday or Monday; then the Tuesday, and Wednesday following are the first days. The second fair is alwayes upon the 20<sup>th</sup> of September, except in the foresaid cases; and then the Tuesday and Wednesday following.

At *Haddingham* St. Peters Fair on the 29 of Jan<sup>y</sup>, which is like to prove the greatest Fair of Harts, Kine and Sheep in that part of the Countrey.

# A description of the four Quar- ters of the year : and first Of the Spring.

**T**he Spring Quarter begins at the Suns entrance in the Equinoctial Sign *Aries*, which is upon the 9 of *March*, 20 min, past 2 in the afternoon, making the dayes and nights of an equal length.

## Of Summer.

**S**ummer Quarter taketh its beginning when the Sun entereth the first minut of the Tropi- cal Sign *Cancer*, which is upon the 21 day of *June*, 44 minuts past 7 in the morning, when the dayes are at the longest.

## Of Harvest.

**A**utumn, or Harvest Quarter, taking its beginning when the Sun entereth the Equi- noctial Sign *Libra*, which happeneth the 22 of *September*, 10 minuts past 5 in the after-noon, the day and night being equal.

## Of Winter.

**W**inter Quarter taketh its beginning when the Sun entereth the Sign *Capricorn*, which is upon the 20 of *December* at 7 a clock at night, the dayes at that time being at the short- est, and the nights at the longest. The

The exact day, hour and minut of the New Moon, her Full and Quarters; with the daily disposition of the Weather; and whole known Fairs in Scotland, for the year 1676.

Thomas in Glasgow the 15 day, a fair at Dean in  
Monteith 15 day. S. Johns day in Bamff, Forres,  
Methil near Levensmouth 17 day.

*How to know the Weather end of the new and  
full Moon.*

 ON the third day before the new and full  
Moon, mark well the Moon when there  
goeth or proceedeth from her a clear light shi-  
ning, it betokeneth fair weather. and also win-  
ny and if the Moon be black or dark, it is a  
oken of cold air and rainy.

When there is a fair and clear circle by the  
Moon and that being sharp and bright, it be to-  
keneth a fair and clear air, and if there be two  
or

When the Moon, it betokeneth a col  
weather.

When there is a darkness about it, there is a token of Winterly air, which cometh through strong winds. And if it be black about it, then it is of such like weather also.

When the Moon ariseth and shineth fair, it betokeneth fair weather: when red, black, rain.

Likewise, as the weather is on the third day after the new and full Moon, so shal the weather be ten dayes after most commonly. A sudden and hasty rain cometh alwayes from the wind that went before.

The greatest winds be commonly in Harvest: the sudden coming of cold and heat, cometh of the wind and of the rain.

There goeth commonly before thunder, great winds.

When the wind goeth from the Occident, then it is commonly rainy weather. From the East is fair weather. From mid-night, it is cold and hard weather. From noon, hurricall and unhealthful weather,

If it do hail in the midst of Summer, it is a token of great cold in the higher region of the air. When the lower part is hot, that causeth hail to come from above.

The use of this, and the following Table, is this, first find the age of the Moon on the other side, with which age of the Moon found, enter this little Table, and there (by inspection only) it will shew you the hour and minute of full Sea, or high Water at *Leith*.

A Table shewing the hour and minute of high water at *Leith* for every day of the Moons age, increasing or decreasing.

Moons Age	hours & min.	Full Sea at <i>Leith</i>
16	2	44
17	3	32
18	4	20
19	5	8
20	5	56
21	6	44
22	7	32
23	8	20
24	9	8
25	9	56
26	10	44
27	11	32
28	12	20
29	1	8
30	1	56

As for Example, I demand what time it will be full Sea at *Leith*, upon the 24 day of *March* 1676 I enter the following Table, and finds (directly over against the 24 day of *March*) the Moons age to be 21 days old: with which 21 I enter this little Table, and over against it, I see 6. 44. viz. 6. hours 44. minutes, signifying that 44. minutes past 6. that morning or afternoon, it will be full Sea at *Leith*. More examples in a thing so plain. were but superfluous.

A ready Table shewing the Age of the Moon  
every day throughout this year, 1696.

The days of the Moneths.	January	February	March	April	May	June	July	August	Septemb.	Octob.	Novemb.	Decemb.
